

IMSverify - Customer Testimonial

Elbit Systems - Cyclone

Since 1999 Elbit Systems - Cyclone have worked in close conjunction with IMS to improve and devolve all of their off machine post processing and verification systems. They now use IMS Software exclusively to generate all of their NC machine tool code for Fanuc, Siemens, Mazak, and a variety of other less known controls systems whilst IMSverify process verification software is used on all of their machine tools including 3, 4, & 5 Axis configurations.

“We run all of our programs on IMS verification software and issues can easily be seen and corrected by the programmer prior to actual machining. Once we see the correct result on IMSverify we can send the NC program to the machine tool.

Since we have been using this software we have reduced our prove out time to almost ZERO on the actual machine and we expect to get a 'First Article Inspection' EVERY TIME'. This has saved us valuable machine tool hours, scrap parts, broken tools, and machine damage. Additional to this is the confidence factor it gives the programmer and machine tool operator. This is a must have tool for any machine shop”.
